KEYWORDS Erythrina lithosperma Lectin. High Diastolic Blood Pressure. Polymorphism

ABSTRACT The LH specificity refers to weak (LH-negative) or strong (LH-positive agglutination of erythrocytes obtained with the lectin from Erythrina lithosperma. The LH status of patients with high diastolic blood pressure has been estimated by this anti-LH lectin. Erythrocyte samples from 325 confirmed cases of high diastolic blood type and compared with an appropriate control. The results suggest no association between patient with high diastolic blood pressure and LH reaction patterns.
