ABSTRACT Two hundred sixty-five adolescent girls (age 11+ to 15+) of Scheduled Caste community of Amritsar were the subjects of study. The study showed that only 29.43\% girls were normal and 70.57\% were affected with various grades of anaemic condition, 30.57\% girls being mildly anaemic and 27.17\% moderately anaemic while 12.83\% suffered from severe anaemia. Severe anaemia had its wrath in age group 15+.
