KEYWORDS Trigenocephaly. Partial Trisomy 13. Polydactyly. Opitz C Syndrome

ABSTRACT Opitz Trigenocephaly C syndrome (OTCS) or Opitz C Syndrome or C syndrome is a congenital malformation syndrome characterized by trigonocephaly, mental retardation and several other dysmorphic features. Commonly reported chromosomal abnormalities associated with trigonocephaly include 3q-, 7p-, 9p-, 11q-, and trisomy 13q. The present case report describes a patient with derivative 7, due to an unbalanced translocation t(7;13)(p22;q21), with a clinical phenotype of OTCS. To the best of researchers' knowledge, this is the second published case report on Opitz Trigenocephaly C syndrome with similar chromosomal abnormality from India.
