ABSTRACT This paper presents detailed information on percentiles of anthropometric variables for various population groups of Jammu and Kashmir state of India. The centile tables are presented for the boys aged 8+ to 18+ years and for male adults of the three major population groups (Bodhs, Baltis and Dogras) of Jammu and Kashmir state. These tables for anthropometric measurements would be useful for future reference since no such tables are available in the literature so far. These percentiles are also useful in assessment of community health and monitoring the development process of various population groups of the state.
