KEYWORDS Palmar Dermatoglyphic. Relli. Manne Dora. Andhra Pradesh

ABSTRACT Some of the qualitative palmar dermatoglyphic characters of 100 Relli caste individuals and 100 Manne Dora tribals of Andhra Pradesh are reported in this paper. The variables studied are principal mainline formulae, frequency of true patterns in different configuration areas, interdigital ridge counts on a-b, b-c and c-d and angle at d. The bimanual and bisexual differences among these two populations are ascertained.
