KEYWORDS Post-Axial Polydactyly. Digital Triradil. Axial-Triradius. Triradius D¹

ABSTRACT The present study is based on 33 post-axial type of polydactylous heads to examine association between extra digit and corresponding digital triradius. The results show that acute polydactyly occurs in association with an extra digital triradius on palm but in syndactylous polydactyly extra digital is not found at the base of duplicated digit.
