Palampur 176 062, Himachal Pradesh, India*

KEYWORDS Pregnancy, Total Protein, Albumin, Globulin, A/G Ratio

ABSTRACT Expectant mothers during three trimesters of pregnancy were diagnosed for plasma protein status, as protein status play an important role during this period. A control group constituting normal healthy females (non-pregnant, non-lactating) was also selected for comparison. Significant differences was observed for total protein, albumin and A/G ratio during the gestation period. Total protein and albumin values showed a gradual fall.
