KEYWORDS Population Genetics. Breeding Population. Polymorphisms. Blood Groups. Serum Proteins. Red Cell Enzymes. Haemoglobin Variants. HLA. DNA

ABSTRACT The human population genetics incorporates study of biology and environmental factors, as well as the forces of micro-evolution leading to macro-evolution, which ultimately influences the structure of human populations. In the present paper an attempt has been made to give a brief review of the genetics and distribution of some of the polymorphic traits - blood groups, human leucocyte antigens, serum proteins, red cell enzymes, haemoglobins and DNA.
